

Highly energy efficient, affordable, recyclable windows and doors.

Delivered anywhere, fully glazed & ready to install.

Standard features with maximum performance

Our uPVC windows come standard with energy efficient features which ensure every home stays warm, dry, and insect free – all at a price that's nearly impossible to beat.

Double Glazing

Helps insulate, reduce noise, and keep homes warm and dry.

Low-E Glass

Protects furniture and floors from UV damage, and helps insulate.

Argon Gas Fill

Inert, invisible gas between glazing for maximum insulation.

Insect Screens

Lets fresh air in, keeps insects out, and won't block views.

Blast past the 2021 Building Code updates

Our standard uPVC windows already exceed the new Building Code by at least 26%.

Double Glazing Insulation Performance (R Value)

A higher number means better insulation.

0.73 Rw

Our uPVC windows with low-E 366/i89 & argon

0.63 Rw

Our standard uPVC windows with low-E 272 & argon

0.50 Rw

Thermally broken aluminium with low-E & argon

0.50 Rw

New Building Code (Climate Zones 5-6)

0.46 Rw

New Building Code (Climate Zones 1-4)

R values for products sold by Ameribuild represent whole window (Rw) values, not just the glass or frames by themselves, based on metric NFRC testing data. European testing methods may yield different results. Other data sourced from publicly available sources, including MBIE and BRANZ. All data was correct at the time of publication.

Sustainability is built in

Not only is our uPVC extremely energy efficient, it's manufactured sustainably too. Our uPVC products are made for a better world outside everyone's windows.

Highly Recyclable

98% of our uPVC joinery can be easily recycled by Marley™ right here in New Zealand. Recycled uPVC from joinery is ideal for reuse in downpipes, cladding, or electrical conduit.

Made from Recycling

Up to 25% of our uPVC joinery is made from recycled uPVC material, sourced from old downpipes, guttering, joinery, and waste made during manufacturing.

Very Low Waste

About 99% of waste material generated from manufacturing our windows and doors is recovered and reused. Even the likes of spilled paint pigments and glass off-cuts are recycled right in the factory.

Minimal Packaging

Our joinery is shipped with cardboard buffers, reusable wooden pallets, and reusable woven air bags. A thin layer of shrink-wrap holds it all together, which can be recycled with other common soft plastics.

Every Kiwi home deserves to be warm, dry, and as energy efficient as possible.

Ameribuild offers windows and doors with more standard features, higher performance, and comparatively lower cost, than nearly all other joinery companies currently operating in New Zealand. We pride ourselves on the speed and ease of ordering our products, and the exceptionally high value for money we offer our clients.

Options for every home

Awning Windows

Casement Windows

Sliding Windows

Hung Windows

Custom and Fixed Windows

Sliding Doors

Specialty Sliding, Stacking, and Bifold Doors

Clad Wood and uPVC Entry Doors

Proudly serving all of New Zealand

Our office may be in Wellington, but we supply our joinery all over the country. Since our products arrive fully glazed and assembled, any qualified builder can easily install our windows and doors. From the top of the North to the bottom of the South, we've got you covered.
